

YASH CHOUDHARY

Dublin, Ireland | +353 899516400 | yashc.dev@gmail.com | LinkedIn: yash-here | yash-choudhary.github.io

SUMMARY

Senior full-stack developer, **4.5+ years** in Fintech and IoT, working across **Vue and React frontends and the Python services behind them**. Built products **0-to-1**, including a payment gateway from architecture to launch; architected scalable microservice systems; hardened auth infrastructure; shipped integrations now used across **50%+** of the target market. Used to flat, high-autonomy teams where engineers take end-to-end ownership. Based in Dublin, Ireland. MSc in Business Analytics, UCD Smurfit.

EXPERIENCE

SENIOR FULL-STACK DEVELOPER

April 2025 - August 2025

ENOVATE-IT OUTSOURCING PVT. LTD.

Pune, India

- Architected a monolith-to-microservices migration of a production system on Docker and Kubernetes, cutting running costs by nearly **30%** and improving scalability
- Designed a Kafka-based messaging layer to decouple services and handle rate-limiting and retries, boosting **performance ~40%**
- Owned a PMS mapping framework end-to-end, unlocking integrations with leading providers and **capturing 54%** of the US vacation rental market
- Mentored junior engineers through onboarding and product handovers

FULL-STACK DEVELOPER

July 2022 - March 2025

ENOVATE-IT OUTSOURCING PVT. LTD.

Pune, India

- Scaled a banking platform's **API throughput 35%** via Elasticsearch optimisation and Redis caching
- Re-architected the authentication module end-to-end, shipping **2FA** and advanced security controls to production
- Built IoT device connector and mapping layers from the ground up over MQTT, reaching **76%** of the US home automation market
- Built and shipped user-facing features in Vue.js and TypeScript alongside the platform's backend services
- Took part in the on-call rotation, diagnosing and resolving production issues
- Ran sprint planning and retrospectives, driving delivery milestones

ASSOCIATE SOFTWARE ENGINEER

July 2021 - June 2022

ICERTIS

Remote - India

- Shipped contract approval and vendor e-signing for a B2B enterprise platform, with real-time status and immutable audit logging, cutting auditing **costs 20%**
- Modernised legacy product UI onto a shared Material UI component library, improving accessibility and shipping velocity
- Awarded **"Star Performer"** twice for delivering mission-critical features ahead of schedule

PLATFORM ENGINEER INTERN

Jan 2021 - June 2021

ICERTIS

Remote - India

- Optimised the product for mobile and tablet interfaces, increasing **user engagement by ~20%**
- Built integration test suites covering full product functionality, cutting release cycles **~15%**
- Redesigned the theme manager, enhancing usability and adding dark mode

EDUCATION

MSC BUSINESS ANALYTICS (1.1 EXPECTED)
UCD SMURFIT GRADUATE BUSINESS SCHOOL

Sep 2025 - August 2026
Dublin, Ireland

BACHELOR OF TECHNOLOGY IN COMPUTER SCIENCE - 9.20/10 (1.1 EQUIVALENT)
S.R.M. UNIVERSITY

June 2017 - July 2021
Chennai, India

PROJECTS

- **TRANSFORMER SEMANTIC GENETIC PROGRAMMING:** Trained an encoder–decoder transformer (~934K parameters, 5M expression pairs) as the variation operator in a genetic programming loop; batched decoding and graph compilation cut inference **1,375 ms → 84 ms per individual (16×)** and a 291-hour benchmark grid → 10.5 hours.
- **COMPETITIVE INTELLIGENCE AGENT (GEMMA 4 + GEMINI EMBEDDINGS):** Built the goal-decomposition layer of a plan-then-execute LLM agent with 6 registered tools, native function calling, SQLite memory and RAG over a Chroma vector store; planning raised answer accuracy **0.95 → 1.00** and cut mean latency **91.9 s → 75.1 s**, while retries, observation caps and batching held a 16K token/min budget and cut a classification pass ~45 min → ~1 min.
- **WHEAT HEAD DETECTION (KAGGLE GLOBAL CHALLENGE — 8TH/1800 TEAMS):** Built an end-to-end Faster R-CNN + ResNet-50 pipeline achieving **0.7699 mAP**; cut-mix, mix-up, mixed precision, TTA and weighted box fusion improved results **17%**.
- **FAST NEURAL STYLE TRANSFER:** Fine-tuned a VGG16-based encoder–decoder model; cut inference time for 512×512 images **1.5 hours → 1 second (98% faster)**.

PUBLICATIONS

- **Choudhary, Y., Eliazer, M., & Jain, A. (2021). AUTOMATED DETECTION AND GRADING OF DIABETIC RETINOPATHY USING CNN.** Turkish Journal of Physiotherapy and Rehabilitation, 32(3), 874-882

AWARDS AND ACHIEVEMENTS

- 8th position out of 1800 teams in Global Wheat Detection Challenge | **Kaggle**
- 2X Star Performer Award | **Icertis**
- Smart India Hackathon 2020 Internals Winner | **AICTE India**

KEY SKILLS

- **Languages:** Python 3, SQL, JavaScript, TypeScript, Go, C++
- **Frameworks & Libraries:** Django, FastAPI, Node.js, NestJS, React.js, Vue.js, PyTorch, TensorFlow, LangChain
- **Databases & Platforms:** PostgreSQL, MySQL, MongoDB (NoSQL), Elasticsearch, Redis, Kafka
- **AI:** LLM APIs (Gemini, OpenAI, Anthropic, open-source), AI agents & tool calling, RAG (embeddings & vector search), Transformers, Model inference optimisation
- **Specialisms:** Microservices, RESTful API design, Message queues & rate limiting, Retries & failure handling, Caching & query performance, Design systems & component libraries, Production debugging & incident response, End-to-end ownership
- **DevOps & Cloud:** AWS, Docker, Kubernetes, Terraform/IaC, CI/CD Pipelines, Git/GitLab, MQTT, Monitoring & observability, On-call, Agile/Scrum
